

Order C (weakest donors first): biggest newcomer boosts — and held-out graphs recover too

NM 3-shot / 30-way · matched step 40k · within-balanced · Δ regret gap between consecutive rungs = Δ AUC (best-per-graph reference cancels)

every bar = Δ regret gap at that step on one shared scale · in-mix means stay within ± 0.012 of zero · out-of-mix graphs GAIN $+0.013 \dots +0.074$ per step (headroom recovery)
