

SAMGPT · adjacent-rung changes, zoomed

Positive = improvement · solid: still held out · $\square$: target enters · faint dashed: target included

Zoom: ± 0.02 margin units. Triangles at the boundary mark off-scale deltas. Δ = margin at rung k – margin at rung $k-1$, for the same target and source order. Raw margin units; common y-scale.

Archived August 2026 ladder · one training seed · each rung is a separate mixture model. At rung 9 no target remains held out.
