

Native-objective pair impact · held-out targets only

Targets grouped in legend order · separate metric scales · black bars = medians

GraphMAE reconstruction: no per-target native evaluation grid found. Its static-link results are a downstream task and are excluded.

PRODIGY: 2,500 updates / seed 0. GraphSAGE: SSL-validation-selected checkpoints / seed 0. SAMGPT: 500 updates / seed 39.

Held-out = target absent from both pair sources. One seed per model; native tasks, protocols, and scales differ; dots are dependent.
