

Adding a source mostly helps itself — averaged over its addition events

NM 3-shot / 30-way · matched step 40k · bar = mean over the source's measurable additions (3 orders; 2 for ukr / covid / elec '20), whisker = min/max over those events
green = its own graph's jump · coral / gray = mean Δ over the other graphs by role · n = events with any held-out target left · gray upside = order-C headroom recovery
